

# Polybutadiene: a high volume rubber simulated with MD simulations

## Poster presentation

- Structure and dynamics at polymer–solid interfaces: atomistic molecular dynamics (MD) simulations of 1,4–polybutadiene at graphite surfaces
  - Mathieu Solar<sup>1</sup>, Wolfgang Paul<sup>1</sup>, L. Yelash<sup>2</sup>, P. Vrinau<sup>2</sup> and K. Binder<sup>2</sup>
  - <sup>1</sup> Theoretical Polymer Science - Department of Physics Martin-Luther-University Halle-Wittenberg (Germany)
  - <sup>2</sup> Institute of Physics, Johannes-Gutenberg-University, 55099 Mainz (Germany)
- Understanding the chain dynamics for a specific polymer close to a solid interface (graphite surface).
- Use of atomistic MD simulations, instead of continuum theories.
